

Protocol for Increments Analysis

Overview of Requirements for Increments Analysis

The federal Prevention of Significant Deterioration (PSD) program is intended to ensure that economic growth in areas with good air quality occurs without causing the deterioration of that air quality to unhealthful levels. The PSD program contains a number of requirements that apply to new or modified sources of air pollution that are located in clean air areas. In the Bay Area Air Basin, the Bay Area Air Quality Management District (BAAQMD) has been delegated authority by the USEPA to administer the PSD program. These PSD program requirements, applied on a pollutant-specific basis, include conducting an increments analysis to demonstrate that no increments will be exceeded as a result of the proposed new or modified source.

The Eastshore Energy Center does not trigger the requirements of the PSD program. Therefore, no protocol is required, and no increments analysis is proposed.
